

## Code Review # Final

- as per code quality, there are some gaps that need to be fulfilled.
  - applying best practices and concepts (semantically written html/jsx, react's reconciliation) is a plus
  - understanding the purpose of unit tests and how to write them
  - javascript for loop and array functions
- conceptually, some mistakes were made:
  - separating logic from the views (as per guidelines)
  - same goes for requirements

Regarding merge request's approval — I would not approve such MR, because key requirements were not met. If key updates have been done, I would re-review the MR again.
